ACKNOWLEDGMENTS

The following individuals contributed to the development of this document: Bruce Allen (Missouri Botanical Garden-MOBOT), Mike Arduser (Missouri Department of Conservation-MDC), Jeff Briggler (MDC), Christopher Brown (Monsanto), Dorothy Butler (MDC), Rick Clawson (MDC), Jackie Combes (MDC), Tom Dailey (MDC), Carl Darigo (MOBOT), Bob DiStefano (MDC), Bill Elliott (MDC), Scott Faiman (MDC), Debby Fantz (MDC), Dennis Figg (MDC), Jane Fitzgerald (Partners In Flight), Andy Forbes (MDC), Dave Hamilton (MDC), Peggy Horner (MDC), Bob Hrabik (MDC), Brad Jacobs (MDC), Tom Johnson (MDC-retired), Harold Kerns (MDC), Phil Koenig, Doug Ladd (The Nature Conservancy), Bill Mabee (MDC), Ted MacRae (Monsanto), Paul McKenzie (U.S. Fish and Wildlife Service-USFWS), Stephen McMurray (MDC), Travis Moore (MDC), Tim Nigh (MDC), Ron Oesch, William Pflieger (MDC-retired), Barry Poulton (U.S. Geological Survey), Andy Roberts (USFWS), Randy Sarver (Department of Natural Resources), Tim Smith (MDC), Janet Sternburg (MDC), Richard Thoma (Monsanto), James Trager (MOBOT, Shaw Nature Reserve), Linden Trial (MDC-retired), Matthew Winston, George Yatskievych (MOBOT).

NOTICE: Please submit reports of all sightings of species and natural communities listed in this checklist on the forms provided in the back of this checklist. Special criteria apply to birds and reports should follow the guidelines listed in Appendix A.

INTRODUCTION

The Department of Conservation is charged with the protection and management of Missouri's fish, forest, and wildlife resources. In the brief time since the settlement of Missouri, many plants and animals have declined to levels of concern and some have disappeared entirely. The species cataloged in this checklist represent 18 percent of the native vascular plants, 14 percent of the nonvascular plants and 28 percent of the vertebrate animals in Missouri. Together, the animals, plants, and natural communities represent Missouri's biological diversity—a heritage worth protecting.

The Department maintains two references relating to the status of listed plants and animals in Missouri; the *Missouri Species of Conservation Concern Checklist* and the *Wildlife Code of Missouri*. **The Missouri Species of Conservation Concern Checklist possesses no legal authority and is utilized for planning and communication purposes.** All species in the State of Missouri are protected as biological diversity elements unless a method of legal harvest is described in the *Wildlife Code*. Species listed in the *Wildlife Code* under 3CSR10-4.111 are protected by State Endangered Species Law 252.240. Some of the plants and animals in the checklist also appear in the *Wildlife Code* and are afforded special legal protection. All federally endangered and threatened plants and animals are protected by the Endangered Species Act of 1973 (ESA) and by Missouri State Endangered Species Law.

How to use the checklist

The checklist, developed with the cooperation of specialists throughout the state, is a list of plants, animals, and natural communities the Department of Conservation is particularly concerned about due to population declines or apparent vulnerability. The state rank (SRANK) shows the level of concern for each species' continued existence in Missouri. For each Element (i.e., species, subspecies or variety, or natural community type), at least 6 basic factors are considered when assigning an SRANK:

- the estimated number of Element Occurrences (EOs) throughout the Element's state range
- the estimated state abundance of the Element (measured by population, area, or stream length)
- the estimated size of the Element's state range
- the trend in the Element's distribution over its state range
- the estimated number of adequately protected EOs throughout the Element's state range
- the degree to which the Element is threatened in the state

The checklist also indicates, for each lichen, plant, and animal Element in the heritage inventory, information on the Element's global rank (i.e., its relative rarity or endangerment in the world). This is useful for understanding the relative rarity or endangerment of an Element from a global perspective (beyond state, national, or regional boundaries). Global ranks (i.e., GRANKS), are completed by the Heritage/Conservation Data Center personnel and/or NatureServe. For each Element, the same six factors listed above for SRANKS are considered when assigning GRANKS, but in a global context. Additionally, the fragility or susceptibility of the Element to intrusion or disturbance is considered when assigning a global rank.

The Global and State Ranking System methodology was developed and provided by The Nature Conservancy, Conservation Science Division, in association with the Network of Natural Heritage Programs and Conservation Data Centers. NatureServe 2005. NatureServe Central Databases. Arlington, Virginia. U.S.A.

The checklist is arranged by broad taxonomic groups (e.g., terrestrial natural communities, flowering plants, insects, fish, and mammals). Within each group, species are arranged alphabetically by their scientific names and terrestrial natural communities by community type. Each Element is identified by its scientific name, common name, federal status, state status, global rank, and state rank.

TERMS AND DEFINITIONS

FEDERAL STATUS

The federal status is derived from the provisions of the Endangered Species Act of 1973, as amended, which is administered by the U.S. Fish and Wildlife Service. Passage of the Endangered Species Act of 1973 gave the United States one of the most far-reaching laws ever enacted by any country to prevent the extinction of imperiled animals and plants. Protecting endangered and threatened species and restoring them to the point where their existence is no longer jeopardized is the primary objective of the Fish and Wildlife Service's Endangered Species Program.

E: Endangered: Any species which is in danger of extinction throughout all or a significant portion of its range.

T: Threatened: Any species which is likely to become endangered within the foreseeable future.

C: Candidate: Plants or animals which the Service is reviewing for possible addition to the list of endangered and threatened species.

PE: Proposed Endangered: Species officially proposed for listing as endangered; final ruling not yet made.

PT: Proposed Threatened: Species officially proposed for listing as threatened; final ruling not yet made.

STATE STATUS

Rule 3CSR10-4.111 of the *Wildlife Code of Missouri* and certain state statutes apply to state *Code* listed species.

E: “Endangered”: Determined by the Department of Conservation under constitutional authority.

GLOBAL RANK

A numeric rank (G1 through G5) of relative endangerment based primarily on the number of occurrences of the Element (i.e., species, subspecies, or variety) globally. Other factors in addition to the number of occurrences are considered when assigning a rank, so the numbers of occurrences suggested for each numeric rank below are not absolute guidelines.

G1: Critically Imperiled: Critically imperiled globally because of extreme rarity or because of some factor(s) making it especially vulnerable to extinction. Typically 5 or fewer occurrences or very few remaining individuals (<1,000) or acres (<2000) or linear miles.

G2: Imperiled: Imperiled globally because of rarity or because of some factor(s) making it very vulnerable to extinction or elimination. Typically 6 to 20 occurrences or few remaining individuals (1,000 to 3,000) or acres (2,000 to 10,000) or linear miles (10 to 50).

GLOBAL RANK (Cont.)

G3: Vulnerable: Vulnerable globally either because very rare and local throughout its range, found only in a restricted range (even if abundant at some locations), or because of other factors making it vulnerable to extinction or elimination. Typically 21 to 100 occurrences or between 3,000 and 10,000 individuals.

G4: Apparently Secure: Uncommon but not rare (although it may be rare in parts of its range, particularly on the periphery), and usually widespread. Apparently not vulnerable in most of its range, but possibly cause for long-term concern. Typically more than 100 occurrences and more than 10,000 individuals.

G5: Secure: Common; widespread and abundant (although it may be rare in parts of its range, particularly on the periphery). Not vulnerable in most of its range. Typically with considerably more than 100 occurrences and more than 10,000 individuals.

G#G#: Range Rank: A numeric range rank (e.g., G2G3) is used to indicate uncertainty about the exact status of a taxon. Ranges cannot skip more than one rank (e.g., GU should be used rather than G1G4).

GNR: Not Ranked: Status has not been assessed.

GU: Unrankable: Currently unrankable due to lack of information or due to substantially conflicting information about status or trends. Note: Whenever possible, the most likely rank is assigned and the question mark qualifier is added (e.g., G2?) to express uncertainty, or a range rank (e.g., G2G3) is used to delineate the limits (range) of uncertainty.

GH: Possibly Extinct/Extirpated: Known from only historical occurrences, but may nevertheless still be extant; further searching needed.

GX: Presumed Extinct: Believed to be extinct throughout its range. Not located despite intensive searches of historical sites and other appropriate habitat, and virtually no likelihood that it will be rediscovered.

SUBRANK:

T: Taxonomic Subdivision: Rank applies to a subspecies or variety.

QUALIFIERS:

?: Inexact Numeric Rank: Denotes inexact numeric rank. (The ? is not used in combination with range ranks.)

Q: Questionable Taxonomy: Distinctiveness of this entity as a taxon or community at the current level is questionable; resolution of this uncertainty may result in change from a species to a subspecies or hybrid, inclusion of this taxon in another taxon, or inclusion of this community within another community, with the resulting Element having a lower-priority (numerically higher) conservation status rank.

STATE RANK

A numeric rank (S1 through S5) of relative endangerment based primarily on the number of occurrences of the Element (i.e., species, subspecies, or variety) within the state. Other factors considered when assigning a rank include: abundance, population trends, distribution, number of protected sites, degree of threat, suitable habitat trends, level of survey effort and life history. Thus, the number of occurrences suggested for each numeric rank below are not absolute guidelines. Missouri species of conservation concern typically do not fall within the range of S4-S5.

S1: Critically Imperiled: Critically imperiled in the nation or state because of extreme rarity or because of some factor(s) making it especially vulnerable to extirpation from the state. Typically 5 or fewer occurrences or very few remaining individuals (<1,000).

S2: Imperiled: Imperiled in the nation or state because of rarity or because of some factor(s) making it very vulnerable to extirpation from the nation or state (1,000 to 3,000). Typically 6 to 20 occurrences or few remaining individuals (1,000 to 3,000).

S3: Vulnerable: Vulnerable in the nation or state either because rare and uncommon, or found only in a restricted range (even if abundant at some locations), or because of other factors making it vulnerable to extirpation. Typically 21 to 100 occurrences or between 3,000 and 10,000 individuals.

S4: Apparently Secure: Uncommon but not rare, and usually widespread in the nation or state. Possible cause of long-term concern. Usually more than 100 occurrences and more than 10,000 individuals.

S5: Secure: Common, widespread, and abundant in the nation or state. Essentially ineradicable under present conditions. Typically with considerably more than 100 occurrences and more than 10,000 individuals.

S#S#: Range Rank: A numeric range rank (e.g., S2S3) is used to indicate the range of uncertainty about the exact status of the Element. Ranges cannot skip more than one rank (e.g., SU is used rather than S1S4).

S?: Unranked: Species is not yet ranked in the state.

SU: Unrankable: Currently unrankable due to lack of information or due to substantially conflicting information about status or trends.

SE: Exotic: An exotic established in the state; may be native in nearby regions (e.g., house finch or catalpa in eastern U.S.)

SA: Accidental/Nonregular: Accidental or casual in the state (i.e., infrequent and outside usual range).

SP: Potential: Potentially occurring in the state but no occurrences reported.

SR: Reported: Element reported in the state but without persuasive documentation which would provide a basis for either accepting or rejecting (e.g., misidentified specimen) the report.

SRF: Reported Falsely: Element erroneously reported in the state and the error has persisted in the literature.

STATE RANK (Cont.)

SH: Historical: Element occurred historically in the state (with expectation that it may be rediscovered). Perhaps having not been verified in the past 20 years, and suspected to be still extant.

SX: Extirpated: Element is believed to be extirpated from the state.

QUALIFIERS:

?: Inexact or Uncertain: Denotes inexact or uncertain numeric rank. (The ? qualifies the character immediately preceding it in the SRANK. The ? is not used in combination with range ranks.)

SPECIES CHANGES

STATUS CHANGES

PLANTS

Carex sterilis (A Sedge) from S1 to S2 due to the documentation of this fen species from 14 extant sites.

Descurainia pinnata ssp. *pinnata* (Tansy Mustard) from SH to S2S3 due to a review of herbarium specimens documented by the Flora of Missouri Project. Four collections were found with collection dates after 1981.

Gentiana andrewsii var. *andrewsii* (Closed Gentian) from SH to S1 due to recent documentation of the species in Washington Co. by Alan Brant. The most recent collection previously was by Steyermark in 1950 (Ste. Genevieve Co.).

Glycyrrhiza lepidota var. *lepidota* (Wild Licorice) from SH to S1 due to the observation of an extant population in Harrison County in 2005 by Dr. Thomas Rosburg of Drake University. The sighting was confirmed by Tom Nagel in 2006, when voucher specimens, photographs and population size estimates were obtained.

Hypericum lobocarpum (A St. John's Wort) from SH to S1 due to the 2006 rediscovery of an extant population at an historical collection site in Ripley Co.

Polygonum densiflorum (Dense-flower Smartweed) from SH to S1S2 due to recent collections from wetlands in St. Charles and Stoddard counties. It is anticipated to occur in other wetlands in eastern Missouri and in the Mississippi Lowlands.

MOLLUSKS

Lampsilis higginsii (Higgins Eye) from SA to S1 because while only recently known from a fresh-dead specimen in the Mississippi River in northeast Missouri, the historical range of the Higgins eye is the Mississippi River above St. Louis.

MAMMALS

Puma concolor (Mountain Lion) from SU and State Endangered to SX. The Conservation Commission changed the status of the mountain lion in Missouri from “endangered” to “extirpated.” Mountain lions historically occurred as a viable, reproducing population, but have been absent from Missouri for some time. The state endangered classification was an artifact from the early 1970s when it was believed—incorrectly, we now know—that mountain lions may have become tenuously reestablished in parts of the Ozark Mountains of Missouri, Arkansas, and eastern Oklahoma. However, repeated efforts to verify their presence produced no credible evidence of established breeding populations.

ADDITIONS

PLANTS

Coenogonium missouriense (A Lichen) as SH based on published report as new species with single occurrence in a Missouri cave. The species may have been extirpated from the single known site.

ADDITIONS (Cont.)

PLANTS (Cont.)

Hydrocotyle ranunculoides (Buttercup Pennywort) as S1S2 due to documentation by George Yatskievych from several locations at Mingo National Wildlife Refuge. First collected by Stan Hudson in 2000 at Otter Slough C.A. but that occurrence was formerly considered possibly introduced. The Mingo sites led to the conclusion that the species is native in SE Missouri.

Lysimachia terrestris (Swamp Candle) as S1 based on first report from MO (Adair Co. acid seep) in 2006.

Minuartia muscorum (Dixie Stitchwort) as S1 because there are only three records, a 1996 collection from Butler County and two historical collections, from Dunklin and St. Louis counties.

REPTILES

Clonophis kirtlandii (Kirtland's Snake) will be added as a S1 based on the discovery of this species in northeastern Missouri. This species was first observed in 1964 in Missouri. Since no additional specimens were observed since 1964, this species was removed as part of herpetofauna of Missouri in 1987. Kirkland's snakes are known to occur in 6 other states and have a global ranking of G2. They are currently listed as state endangered in three states (Pennsylvania, Michigan and Kentucky) and state threatened in three states (Illinois, Indiana and Ohio). With the loss of natural prairies and destruction of habitat due to urban expansion, this species is in danger of being extirpated over much of its range.

TAXONOMIC CHANGES

MOLLUSKS

Marstonia scalariformis to *Pyrgulopsis scalariformis* (Moss Pyrg).

INSECTS

Hydropsyche piatrix to *Ceratopsyche piatrix* (A Net-spinning Caddisfly).

MAMMALS

Cervus elaphus to *Cervus canadensis* (Wapiti).

TERRESTRIAL NATURAL COMMUNITIES

In addition to lichens, plants, and animals, the Missouri Natural Heritage Program tracks occurrences of high quality natural communities. Terrestrial natural communities are interrelated assemblages of plants, animals, and other living organisms incorporated into their physical surroundings- including geologic substrate, soils, topography and aspect- that are shaped by climate and other natural processes. High quality sites are ones that provide diverse assemblages of native species and represent the least distressed examples of ecosystems that existed in Missouri prior to European settlement. These natural communities frequently provide the habitat necessary for Missouri's listed lichens, plants, and animals. Because the Missouri Department of Conservation tracks occurrences of high quality natural communities, we encourage the submission of site information on natural communities as we do for species listed in this Checklist.

State ranks are assigned to natural communities using criteria that are similar to species SRANKs. (Criteria include total number of occurrences, number of occurrences by grade [A-D], total acres, number of counties in which the community type occurs, number of protected occurrences, and threats.) Global ranks are not applied to communities due to the difficulty in reconciling Missouri's classification system with larger scale classifications.

Natural community types have been classified using The Terrestrial Natural Communities of Missouri, Revised edition (Nelson, 2005). This classification system was developed to accomplish an inventory of the state's natural communities, prioritized by quality, size and distribution, to help meet land protection goals. The Terrestrial Natural Communities tracked in Heritage are listed below with their SRANKs by major community type.

<u>COMMUNITY TYPE</u>	<u>SRANK</u>
FOREST	
Dry-Mesic Loess/Glacial Till Forest	S3
Mesic Loess/Glacial Till Forest	S3
Dry-Mesic Limestone/Dolomite Forest	S3

¹ Listed in the Wildlife Code of Missouri, Rule 3 CSR10-4, 111 Endangered Species.

² Federally Listed Species under the Endangered Species Act (ESA) of 1973 as Amended:

Endangered = Any species that is in danger of extinction throughout all or a significant portion of its range.

Threatened = Any species that is likely to become endangered within the foreseeable future.

Candidate = Plants or animals that the U.S. Fish & Wildlife Service is reviewing for possible addition to the list of Endangered and Threatened species.

Proposed = Any species proposed for listing as Threatened or Endangered by the U.S. Fish & Wildlife Service.

³ Considered extirpated, historical or accidental occurrence in Missouri.

FOR MORE INFORMATION

The Missouri Department of Conservation collects and manages information on the location and status of species of conservation concern throughout the state. The Natural Heritage Database is a repository for this information.

If you have information on the location or questions about the status of any element on this checklist, please write or call:

Endangered Species Coordinator
Missouri Department of Conservation
P.O. Box 180
2901 W Truman Blvd
Jefferson City, MO 65109
(573) 522-4115

If you are requesting information about the location of any element on this checklist for the purposes of environmental review, please write:

Policy Coordination
Missouri Department of Conservation
P.O. Box 180
2901 W Truman Blvd
Jefferson City, MO 65109

WEBPAGE

This checklist is updated annually. The most current version is always available by contacting the Missouri Department of Conservation, Resource Science Division. *Checklist* information is also available on the Missouri Department of Conservation's website:

<http://mdc.mo.gov/documents/nathis/endangered/checklist.pdf>

CITATION

An appropriate citation for this edition of the *Checklist* is:

Missouri Natural Heritage Program. 2007. Missouri species and communities of conservation concern checklist. Missouri Department of Conservation. Jefferson City, Missouri. 51pp.

APPENDIX A
BIRD SPECIES TRACKED IN HERITAGE AND THEIR CRITERIA FOR EOs
Updated September 10, 2004

<u>SPECIES (ranks)</u>	<u>REGIONS</u>	<u>CRITERIA (safe dates), COMMENTS</u>
Anseriformes (Ducks, geese, swans)		
Trumpeter Swan (SX, G4)	All (NE, NW)	1
Galliformes (chicken-like birds)		
Ruffed Grouse (SU, G5)	CE, OZ, SL, SE	1
Greater Prairie-chicken (S1, G4)	SW, KC, NW, NE	Anytime observed
Pelecaniformes (pelicans, cormorants, darters)		
Anhinga (SX, G5)	SE	1
Ciconiiformes (herons, egrets, storks, ibises, vultures)		
American Bittern (S1, G4)	All	1 – extensive emergent marshes
Least Bittern (S3, G5)	All	1,2 (5/25-8/1)
Great Egret (S3, G5)	All (SE)	1
Snowy Egret (S2, G5)	SE	1
Little Blue Heron (S3, G5)	SE, SL	1
Black-crowned Night-Heron (S3, G5)	All (SE)	1
Black Vulture (S3, G5)	OZ, SE	1
Falconiformes (hawks, falcons, eagles, kites)		
Osprey (SU, G5)	All (confirmed NE, SW)	1 – Any large open body of water
Mississippi Kite (S3, G5)	All (SE, SL, NE)	1 – Expanding range
Bald Eagle (S3, G4)	All	1 – Any large open body of water
Northern Harrier (S2, G5)	All (except OZ, SE)	1
Sharp-shinned Hawk (S3, G5)	All	1
Swallow-tailed Kite (SX, G5)	SE	1 – Formerly SE, large rivers
Swainson's Hawk (S2, G5)	SW, KC	1
Peregrine Falcon (S1, G4)	SL, KC	1 – Formerly along MO river bluffs
Gruiformes (rails, cranes)		
Sandhill Crane (SU, G5)	NE, NW, CE, SL	1
Black Rail (S1, G4)	All	Anytime observed, large marshes
Yellow Rail (SU, G4)	All	Anytime observed (migrant)
King Rail (S1, G4G5)	All (SE, SL, NE)	1,2 (5/30-7/31)
Virginia Rail (S2, G5)	All	1,2 (5/15-8/1)
Sora (S2, G5)	All	1,2 (5/30-7/31)
Common Moorhen (S2, G5)	All (except OZ)	1,2 (5/30-8/31)
Charadriiformes (gulls, terns, shorebirds)		
Interior Least Tern (S1, G4T2Q)	SE	1 – Formerly along MS, MO Rivers
Black Tern (SX, G4)	NW	1
Cuculiformes (cuckoos, roadrunners)		
Greater Roadrunner (S3, G5)	SW, OZ	Anytime observed
Strigiformes (owls)		
Barn Owl (S3, G5)	All (SE)	1,2 (5/25-8/15)
Long-eared Owl (SU, G5)	All	1 – Forests, dense thickets near water
Short-eared Owl (S2, G5)	SW, NW, NE, KC	1,2 (5/1-8/31)
Piciformes (woodpeckers)		
Red-cockaded Woodpecker (SX, G3)	OZ, SE	Anytime observed

<u>SPECIES (ranks)</u>	<u>REGIONS</u>	<u>CRITERIA (safe dates), COMMENTS</u>
Passeriformes (perching birds)		
Least Flycatcher (SU, G5)	NE, NW	1,2 (5/27-7/7)
Loggerhead Shrike (S2, G5)	All (SW, KC, NW)	1,2 (4/20-7/20)
Brown-headed Nuthatch (SX, G5)	OZ, SE	Anytime observed
Brown Creeper (SU, G5)	SL, NE, OZ	1,2 (5/15-9/15)
Marsh Wren (S3, G5)	All (except SW, SE, OZ)	1,2 (5/25-8/25)
Chestnut-sided Warbler (S3, G5)	All	1,2 (6/1-8/10)
Hooded Warbler (S3, G5)	SE, OZ, SW, SL	1,2 (5/25-7/25)
Cerulean Warbler (S2S3, G4)	All (OZ)	1,2 (6/1-8/10)
Swainson's Warbler (S2, G4)	SE, OZ, SW	1,2 (5/25-8/15)
Bachman's Sparrow (S2, G3)	OZ, SW, SE	1,2 (6/1-8/15)
Painted Bunting (S3, G5)	SW, OZ	1,2 (5/25-8/1)
Yellow-headed Blackbird (S3, G5)	NW (possible anywhere)	1

MDC Region Abbreviations (regions listed are those in which the species is most likely to be recorded):

CE – Central	KC – Kansas City
NE – Northeast	NW – Northwest
OZ – Ozark	SL – St. Louis
SE – Southeast	SW – Southwest

Explanation of Criteria

1. Confirmed breeding. Evidenced one or more of the following:

- Nest building (except wrens and woodpeckers)
- Nest with egg(s) or young (seen or heard)
- Used nest or eggshells
- Physiological evidence of breeding based upon bird in hand (e.g. brood patch)
- Distraction display or injury feigning
- Recently fledged young
- Adults entering or leaving nest site in circumstances indicating nesting
- Adult carrying fecal sac
- Adult carrying food

2. Probable or possible breeding (valid only between safe dates)

Probable

- Male and female seen together (not part of a flock)
- Bird holding territory
- Seven or more singing males detected in one visit
- Courtship or copulation
- Visiting probable nest site
- Agitated behavior or anxiety call (not provoked by observer)
- Nest building by wrens or woodpeckers

Possible

- Species heard or seen in breeding habitat

Survey Date: _____ - _____ - _____ (yyyy-mm-dd)

Surveyor(s) (principal surveyor first; last name, first name): _____

Phone #: (_____) _____ - _____ E-mail address: _____

Street Address: _____

TOPOGRAPHIC MAP (mandatory) Attach a copy of the topographic map or DOQ (no county maps, please!) with the species' location marked. Please identify *who* marked the map (i.e., observer, transcriber, updater, or Heritage Biologist).

Use the following guidelines to draw the source's location on the map as precisely as possible. Note: Heritage mappers will digitize exactly what is drawn on your map.

- Use a fine tip pen to mark a pen point or thin solid line identifying the source location. If the element occurrence or source boundary follows the edge of a lake, stream, road or other feature, draw the boundary precisely on the edge of the feature.
- Disjunct patches of the same element occurrence should be mapped separately and # observed indicated at each site.
- If you are not certain you can draw the observed area's exact location, draw a boundary line inclusive of the entire area where you are certain the source was observed. Draw as small an area as you can while still being certain it contains the actual location of the observed element. Where possible, use features on the map such as roads, streams, contour lines, etc., to delineate this area. For example, draw a line along the stretch of trail where the EO was observed.

Locational Uncertainty: How accurate is your depiction of the source's location on the map?

The mapped location is within (circle appropriate buffer radius in meters): 0 6.25 25 50 100 200 400 800 1500 4000
OR, specify your own estimate: _____ m or _____ ft or _____ mi
